CO<sub>2</sub>  
NEUTRAL

## VANILLA ARE PLANTING TREES

During the production and transport of goods, greenhouse gases are released into the air. Examples are Carbon dioxide CO<sub>2</sub>, Nitrous oxide N<sub>2</sub>O, Ozone O<sub>3</sub>, Methane CH<sub>4</sub>, Freons CFC and many others. The concentration of these gases in the atmosphere negatively affects the environment. It is expressed as the mass of Carbon Dioxide converted = gCO<sub>2</sub>e.

You can find more information at [www.vanillaseason.cz/CO2neutral](http://www.vanillaseason.cz/CO2neutral)

## VANILLA SEASON COMPENSATE FOR THE CARBON FOOTPRINT!

How do we achieve this? First, we calculated the carbon footprint of each product separately. This is a number expressed in gCO<sub>2</sub>e. We used the Life Cycle Assessment (LCA) methodology of the worldwide organization ECOACT. We decomposed each product, including packaging, into the individual materials from which it was made, and weighed each one separately. We also measured on maps how many kilometers Vanilla Season products has to travel either by boat, train, car or plane. Taken together, the data determined the predicted amount of gCO<sub>2</sub>e per piece. The carbon footprint is compensated using offset programs such as the promotion of renewable energy sources as well as planting programs. When a tree grows, it creates its mass through photosynthesis while consuming carbon dioxide from the atmosphere. We decided to plant trees with sazimestromy.cz.
